

HTML

Living Standard — Last Updated 17 December 2025

[← 13.2 Parsing HTML documents](#) — [Table of Contents](#) — [14 The XML syntax](#) →

13.5 Named character references

13.5 Named character references §

This table lists the [character reference](#) names that are supported by HTML, and the code points to which they refer. It is referenced by the previous sections.

Note

It is intentional, for legacy compatibility, that many code points have multiple character reference names. For example, some appear both with and without the trailing semicolon, or with different capitalizations.
