

Here is the **HTML** `<ul><li>` **list** in the simplest and clearest way 📌

✓ Basic Unordered List (`ul` with `li`)

html

📄 Copy code

```
<ul>
  <li>Apple</li>
  <li>Banana</li>
  <li>Mango</li>
</ul>
```

✓ Unordered List with Nested List

html

📄 Copy code

```
<ul>
  <li>Fruits
    <ul>
      <li>Apple</li>
      <li>Banana</li>
    </ul>
  </li>

  <li>Vegetables
    <ul>
      <li>Potato</li>
      <li>Tomato</li>
    </ul>
  </li>
</ul>
```

✓ Change Bullet Style Using CSS

Circle bullets:

html

 Copy code

```
<ul style="list-style-type: circle;">
  <li>Item 1</li>
  <li>Item 2</li>
</ul>
```

Square bullets:

html

 Copy code

```
<ul style="list-style-type: square;">
  <li>Item 1</li>
  <li>Item 2</li>
</ul>
```

Remove Bullets

html

 Copy code

```
<ul style="list-style-type: none;">
  <li>Home</li>
  <li>About</li>
  <li>Contact</li>
</ul>
```

If you want **styled lists with icons**, **TailwindCSS lists**, or **Bootstrap lists**, tell me — I'll generate those too! 🚀

     

li

Here is the **simplest explanation of in HTML** 🙌

✓ What is `<li>`?

`<li>` means **List Item**.

It is used **inside** `<ul>` (unordered list) or `<ol>` (ordered list).

✓ Basic Example with `<li>`

html

 Copy code

```
<ul>
  <li>Item 1</li>
  <li>Item 2</li>
  <li>Item 3</li>
</ul>
```

✓ `<li>` inside Ordered List

html

 Copy code

```
<ol>
  <li>First</li>
  <li>Second</li>
  <li>Third</li>
</ol>
```

✓ `<li>` with Nested List

html

 Copy code

```
<ul>
  <li>Fruits
    <ul>
      <li>Apple</li>
      <li>Banana</li>
    </ul>
  </li>
</ul>
```

If you want, I can also show:

- ✓ styled `<li>`
- ✓ icon bullet list
- ✓ Tailwind list
- ✓ Bootstrap list

Just tell me!

html atributes

Here is the simplest and complete explanation of HTML Attributes 📌

✓ What Are HTML Attributes?

HTML **attributes** provide **extra information** about an HTML element. They are always written **inside the opening tag**.

Example:

html

Copy code

```

```

Here:

- `src` is an attribute
- `alt` is an attribute

✓ Basic Format of an Attribute

html

Copy code

```
<tagname attribute="value">Content</tagname>
```

Most Common HTML Attributes

◆ 1. id

Unique identifier for an element.

html

Copy code

```
<p id="para1">Hello</p>
```

◆ 2. class

Used for styling multiple elements.

html

Copy code

```
<p class="text-red">Hello</p>
```

◆ 3. style

Inline CSS styling.

html

Copy code

```
<p style="color: blue;">Hello</p>
```

◆ 4. href

Used in links.

html

Copy code

```
<a href="https://google.com">Google</a>
```

◆ 5. src

Used for images, videos, scripts.

html

 Copy code

```

```

◆ 6. alt

Shows text if image doesn't load.

html

 Copy code

```

```

◆ 7. title

Tooltip on hover.

html

 Copy code

```
<p title="This is a paragraph">Hover me</p>
```

◆ 8. target

Opens link in new tab.

html

 Copy code

```
<a href="https://google.com" target="_blank">Open in new tab</a>
```

◆ 9. width & height

html

 Copy code

```

```

◆ 10. disabled

For disabling buttons/inputs.

html

 Copy code

```
<button disabled>Click</button>
```

◆ 11. placeholder

For input hints.

html

 Copy code

```
<input type="text" placeholder="Enter name">
```

◆ 12. value

For input's default value.

html

 Copy code

```
<input type="text" value="Aamir">
```

◆ 13. type

For input types.

html

 Copy code

```
<input type="password">
```

★ If you want, I can provide:

- ✓ Complete attributes list
- ✓ Attributes for specific tags (img, a, div, input)
- ✓ Practical examples
- ✓ A mini notes PDF

Just tell me!

complete code attributes concept uses all

Here is a **complete, clean, well-explained HTML code** that uses **all major HTML attributes** in one place.

This will give you the **full concept of attributes** with a practical example.

✓ Complete HTML Code Using All Common Attributes

html

Copy code

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">           <!-- Attribute -->
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>HTML Attributes Complete Example</title>

  <style>
    .box {
      padding: 10px;
      margin: 10px;
      border: 2px solid black;
    }
    .highlight {
      color: red;
    }
  </style>
</head>

<body id="top" style="font-family: Arial;">

  <!-- Heading with title attribute -->
  <h1 title="This is heading">HTML Attributes - Complete Example</h1>

  <!-- Link attributes: href, target, title -->
  <a href="https://google.com" target="_blank" title="Open Google">
    Visit Google
```

```
</a>
```

```
<br><br>
```

```
<!-- Image attributes: src, alt, width, height -->
```

```

```

```
<br><br>
```

```
<!-- Div with id and class -->
```

```
<div id="container" class="box highlight">
```

```
    This div uses: id, class, style (via CSS class)
```

```
</div>
```

```
<!-- Input attributes: type, placeholder, value, disabled, required -->
```

```
<input type="text" placeholder="Enter your name" required>
```

```
<br><br>
```

```
<input type="email" value="demo@example.com">
```

```
<br><br>
```

```
<input type="text" placeholder="Disabled field" disabled>
```

```
<br><br>
```

```
<!-- Button with onclick -->
```

```
<button onclick="alert('Button clicked!')" title="Click me">
```

```
    Click Me
```

```
</button>
```

```
<hr>
```

```
<!-- List attributes -->
```

```
<ul style="list-style-type: square;">
```

```
    <li id="item1">List Item 1</li>
```

```
    <li class="highlight">List Item 2</li>
```

```
    <li title="This is item 3">List Item 3</li>
```

```
</ul>
```

```
<hr>
```

```
<!-- Table with attributes -->
```

```
<table border="1" width="300" cellpadding="10" cellspacing="0">
  <tr>
    <th align="left">Name</th>
    <th align="left">Age</th>
  </tr>
  <tr>
    <td>Aamir</td>
    <td>22</td>
  </tr>
</table>

<hr>

<!-- Form with method, action -->
<form action="/submit" method="POST">
  <label for="email">Email:</label><br>
  <input id="email" name="email" type="email" placeholder="Enter Email"

  <input type="submit" value="Submit Form">
</form>

<br>

<!-- Back to top with id -->
<a href="#top">Back to Top</a>

</body>
</html>
```

✓ What Attributes Does This Code Use?

This code covers all major HTML attribute types, including:

✓ Global Attributes

- id
- class
- style
- title

✓ Anchor (<a>) Attributes

- href
- target

✓ Image () Attributes

- src
- alt
- width
- height

✓ Form & Input Attributes

- type
- placeholder
- value
- disabled
- required
- onclick
- name
- id (label binding)

✓ Table Attributes

- border
- width
- cellpadding
- cellspacing
- align

✓ Meta Tag Attributes

- charset
- content
- name

✓ Script/Event Attributes

- onclick

✓ List Attributes

- list-style-type (inline CSS)

★ Want a PDF version?

I can generate a PDF notes file with:

- ✓ explanations
- ✓ diagrams
- ✓ examples
- ✓ attribute table

Just say **"make PDF"**.

anchor element all type code

Here are **ALL** important types of HTML `<a>` (anchor) element examples — complete, clean, and easy to learn.

This covers **every** use case of `<a>` .

🔥 1. Basic Anchor (Normal Link)

html

Copy code

```
<a href="https://google.com">Go to Google</a>
```

🔥 2. Open Link in New Tab

html

Copy code

```
<a href="https://google.com" target="_blank">Open in New Tab</a>
```

🔥 3. Link With Title (Tooltip)

html

Copy code

```
<a href="https://google.com" title="Click to open Google">Google</a>
```

4. Anchor Link to a Section (ID Jump Link)

html

 Copy code

```
<a href="#about">Go to About Section</a>
```

```
<h2 id="about">About Section</h2>
```

5. Link to Email (mailto)

html

 Copy code

```
<a href="mailto:example@gmail.com">Send Email</a>
```

6. Link to Phone Number (tel)

html

 Copy code

```
<a href="tel:+911234567890">Call Now</a>
```

7. Download File

html

 Copy code

```
<a href="files/report.pdf" download>Download PDF</a>
```

8. Open in Same Page (default)

html

 Copy code

```
<a href="/home.html" target="_self">Home</a>
```

9. Open Link in Parent Frame

html

 Copy code

```
<a href="page.html" target="_parent">Open in Parent</a>
```

10. Open Link in Full Window (top frame)

html

 Copy code

```
<a href="page.html" target="_top">Open in Top Frame</a>
```

11. Link as Button (Using class/style)

html

 Copy code

```
<a href="#" style="padding:10px;background:blue;color:white;">Click Me</a>
```

12. Anchor Without href (acts like span)

html

 Copy code

```
<a>Just Text (No Link)</a>
```

13. JavaScript Void Link (no reload)

html

 Copy code

```
<a href="javascript:void(0)">Do Nothing</a>
```

14. Anchor Calling JavaScript Function

html

 Copy code

```
<a href="#" onclick="alert('Hello!')">Click Here</a>
```

15. Link to File/Folder Path

html

 Copy code

```
<a href="./folder/myfile.txt">Open File</a>
```

16. Open WhatsApp Chat

html

 Copy code

```
<a href="https://wa.me/911234567890">Chat on WhatsApp</a>
```

17. Open Location in Google Maps

html

 Copy code

```
<a href="https://maps.google.com/?q=New+Delhi">Open Maps</a>
```

18. Link With Image (Clickable Image)

html

 Copy code

```
<a href="https://google.com">  
    
</a>
```

19. Anchor With target in iframe

html

Copy code

```
<iframe name="frame1"></iframe>

<a href="page2.html" target="frame1">Load in Frame</a>
```

20. Email With Subject & Body

html

Copy code

```
<a href="mailto:aamir@gmail.com?subject=Hello&body=How are you?">
    Email Me
</a>
```

Want ALL these examples in one full HTML page?

Say "full anchor page" — I'll give you a complete ready-to-run HTML file.

anchor element all code all concept

Below is the **COMPLETE + FINAL + MOST DETAILED ANCHOR (<a>) ELEMENT GUIDE** with every concept + every attribute + all types of code in ONE place.

This is the *best possible* anchor element explanation.

ANCHOR (<a>) ELEMENT – ALL CONCEPTS + ALL CODES

1. Basic Link

```
<a href="https://google.com">Visit Google</a>
```

2. Open in New Tab

```
<a href="https://google.com" target="_blank">Open Google</a>
```

3. Anchor Attributes + Full Meaning

Attribute	Meaning
href	URL or target location
target	Where to open the link
_blank	Open in new tab
_self	Open in same tab (default)
_parent	Open in parent frame
_top	Open in full window
download	Download file
rel	Security, SEO, relationship
title	Tooltip text
type	File type (rarely used)

4. All target Type Links

► Open in same tab

```
<a href="home.html" target="_self">Home</a>
```

► Open in new tab

html

 Copy code

```
<a href="page.html" target="_blank">Open New Tab</a>
```

► Open in parent (frames)

html

 Copy code

```
<a href="child.html" target="_parent">Open Parent</a>
```

► Open in top frame

html

 Copy code

```
<a href="page.html" target="_top">Open Top</a>
```

► Open inside iframe

html

 Copy code

```
<a href="page.html" target="frame1">Load inside iframe</a>
```

5. Anchor Link Without href

html

 Copy code

```
<a>No Link</a>
```

6. Anchor Jump Link (Page Navigation)

◆ Jump to ID

html

 Copy code

```
<a href="#section1">Go to Section 1</a>
```

```
<h2 id="section1">Section 1</h2>
```

✓ 7. Anchor With Tooltip

html

 Copy code

```
<a href="https://google.com" title="Go to Google">Google</a>
```

✓ 8. Clickable Image Link

html

 Copy code

```
<a href="https://google.com">
  
</a>
```

✓ 9. Email Link (mailto)

◆ Simple Email

html

 Copy code

```
<a href="mailto:example@gmail.com">Send Email</a>
```

◆ Email with subject + body

html

 Copy code

```
<a href="mailto:hello@gmail.com?subject=Hi&body=Message Here">
  Email Me
</a>
```

✓ 10. Phone Call Link (tel)

html

 Copy code

```
<a href="tel:+919876543210">Call Now</a>
```

✓ 11. WhatsApp Link

html

 Copy code

```
<a href="https://wa.me/919876543210">Chat on WhatsApp</a>
```

✓ 12. Map Location Link

html

 Copy code

```
<a href="https://maps.google.com/?q=Delhi">Open Delhi in Maps</a>
```

✓ 13. Download File

html

 Copy code

```
<a href="files/data.pdf" download>Download PDF</a>
```

✓ 14. JavaScript in Anchor

◆ Prevent Link Reload

html

 Copy code

```
<a href="javascript:void(0)">Do Nothing</a>
```

◆ Call JS function

html

 Copy code

```
<a href="#" onclick="alert('Hello!')">Click Me</a>
```

✓ 15. Anchor as Button (Using Style)

html

 Copy code

```
<a href="#" style="padding: 10px; background: blue; color: white; border-radius: 5px;">Button Link</a>
```

✓ 16. rel Attribute (Security)

html

 Copy code

```
<a href="https://example.com" target="_blank" rel="noopener noreferrer">Safe External Link</a>
```

Used to prevent security vulnerabilities when opening new tabs.

✓ 17. Absolute vs Relative URL

◆ Absolute URL (full)

html

 Copy code

```
<a href="https://example.com/page">Full URL</a>
```

◆ Relative URL (same folder)

html

 Copy code

```
<a href="about.html">About</a>
```

◆ Parent folder

html

 Copy code

```
<a href="../index.html">Home</a>
```

✓ 18. Anchor Linking to Files

html

 Copy code

```
<a href="/files/photo.jpg">Open Image File</a>
```

✓ 19. Anchor With Query Parameters

html

 Copy code

```
<a href="product.html?id=10&name=mobile">View Product</a>
```

✓ 20. Anchor With CSS Class/ID

html

 Copy code

```
<a href="#" id="navLink" class="menu-item">Menu Item</a>
```

🌟 FINAL: FULL ANCHOR DEMO CODE (ALL TYPES)

One complete ready-to-run file.

html

 Copy code

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <title>Anchor Full Concept</title>
  <style>
    .btn {
      padding: 8px 12px;
      background: blue;
      color: white;
```

```
        text-decoration: none;
        border-radius: 5px;
    }
</style>
</head>

<body>

```

✅ Included All Anchor Concepts

This file includes:

- ✓ Basic Link
- ✓ New Tab (target="_blank")
- ✓ Tooltip (title)
- ✓ Jump Link (#id)
- ✓ Email (mailto:)
- ✓ Phone (tel:)
- ✓ WhatsApp
- ✓ Google Maps
- ✓ Download File
- ✓ JS Links (javascript:void(0) & onclick)
- ✓ Clickable Image
- ✓ Styled Button Link
- ✓ Class & ID
- ✓ Relative & Absolute URLs
- ✓ iFrame target="frame1"
- ✓ Secure Link (rel="noopener")
- ✓ No href anchor
- ✓ Query parameters
- ✓ Parent & top window

If you want, I can also create:

- PDF Notes
- Clickable Anchor Demo Website
- Anchor Practice Exercises

Just tell me!

complete image element code and concept

Below is the **COMPLETE + FINAL + MOST DETAILED** `<img>` **(Image Element) GUIDE** with **ALL** concepts + **ALL** attributes + **ALL** example codes in ONE place.

You can **copy** → **paste** → **run** this HTML file.

🌟 FULL IMAGE ELEMENT CODE + EXPLANATION

✅ 1. Basic Image

html

Copy code

```

```

🌟 ALL IMPORTANT IMAGE ATTRIBUTES

Attribute	Meaning
src	Image file path
alt	Text shown if image fails to load (SEO + Accessibility)
width	Width of image
height	Height of image

Attribute	Meaning
title	Tooltip text
loading	lazy / eager loading
style	inline CSS styling
class	CSS class
id	unique identifier
srcset	multiple images for responsive design
sizes	image size rules for responsive layout
usemap	image map (clickable areas)

 FULL HTML FILE — ALL IMAGE TYPES

html

 Copy code

```

```

🌟 EXPLANATION OF ALL IMAGE CONCEPTS

✓ 1. Basic Image

html

📋 Copy code

```

```

✓ 2. Width & Height

html

📋 Copy code

```

```

✓ 3. Tooltip

html

Copy code

```
<img title="This is image">
```

✓ 4. CSS Styling

html

Copy code

```
<img class="rounded bordered">
```

✓ 5. ID for JS

html

Copy code

```
<img id="profilePic">
```

✓ 6. Lazy Loading

- Loads when image appears on screen
- Saves data + improves speed

html

Copy code

```
<img loading="lazy">
```

✓ 7. Responsive Images

Used for mobile, tablet, desktop images.

html

Copy code

```

```

```
sizes="(max-width:600px) 300px, 1200px">
```

✓ 8. Clickable Image

html

 Copy code

```
<a href="link">
  
</a>
```

✓ 9. Image Map

Clickable areas inside one image.

html

 Copy code

```
<map>
  <area shape="rect" coords="0,0,100,100">
</map>
```

✓ 10. Broken Image

Shows alt text if image fails.

★ Want PDF notes or a practice assignment?

Say "make image PDF" or "give practice questions".

     ...

```
<!DOCTYPE html>
<html lang="en">
```

```
<head>
  <meta charset="UTF-8">
```

```

href="https://youtube.com" alt="YouTube">
</map>

<!-- 11. Broken Image Example (Shows alt text) -->
<h2>11. Broken Image Example</h2>

<!-- 12. SVG Image -->
<h2>12. SVG Image</h2>

<!-- 13. Image As Background (CSS) -->
<h2>13. Image as CSS Background (not img tag)
</h2>
<div style="
  width: 200px;
  height: 150px;
  background-image:
url('https://via.placeholder.com/200');
  background-size: cover;
  border: 2px solid black;
">
</div>

</body>

</html>
```

Great! Here's your **complete & corrected** `<img>` **element code**, but I also improved a few things:

- Fixed wrong SVG line (was using JPG).
- Added comments.
- Ensured all examples are clean and valid.
- Added 2 more important examples (Picture tag, Figure + Figcaption).

Below is the **full FINAL code** for all `<img>` tag concepts 📌

✅ COMPLETE `<img>` ELEMENT CONCEPTS — ALL TYPES (FINAL FULL CODE)

html

📋 Copy code

```
<!DOCTYPE html>
<html lang="en">

<head>
  <meta charset="UTF-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>All Image Tag Examples</title>

  <style>
    .bordered {
      border: 3px solid black;
      padding: 5px;
    }

    .rounded {
      border-radius: 15px;
    }

    .box {
      width: 200px;
      height: 150px;
    }
  </style>
</head>

<body>

  <h1>🖼️ All Types of <img> Element Examples</h1>
  <hr>
```

```
<!-- 1. Basic Image -->
<h2>1. Basic Image</h2>

<!-- 2. Image with Width & Height -->
<h2>2. Width & Height</h2>

<h2>3. Tooltip (title attribute)</h2>

<h2>4. Image With Class (border + rounded)</h2>

<h2>5. Image With ID</h2>

<h2>6. Lazy Loading</h2>

<h2>7. Responsive Image (srcset)</h2>

<p><b>Note:</b> Replace small/medium/large.jpg with your real images.</p>
```

```
<!-- 8. Inline Styles -->
<h2>8. Inline Style</h2>

<h2>9. Clickable Image (inside anchor)</h2>
<a href="https://google.com" target="_blank">
    
</a>

<!-- 10. Image Map (Clickable Areas) -->
<h2>10. Image Map</h2>

    <area shape="rect" coords="0,0,150,100" href="https://google.com" a
    <area shape="rect" coords="150,100,300,200" href="https://youtube.c
</map>

<!-- 11. Broken Image Example -->
<h2>11. Broken Image (shows alt text)</h2>

<!-- 12. SVG Image -->
<h2>12. SVG Image</h2>

</div>
```

```
<!-- 14. Picture Element (Adaptive Images) -->
<h2>14. Using <picture> for Modern Responsive Images</h2>
<picture>
  <source srcset="large.jpg" media="(min-width: 1000px)">
  <source srcset="medium.jpg" media="(min-width: 600px)">
  
</picture>

<!-- 15. Figure + Figcaption -->
<h2>15. Figure + Figcaption</h2>
<figure>
  
  <figcaption>This is a caption for the image.</figcaption>
</figure>

</body>

</html>
```

✓ Included ALL Major Concepts

- ✓ img basic
- ✓ width / height
- ✓ alt
- ✓ title
- ✓ id + class
- ✓ loading="lazy"
- ✓ responsive (srcset + sizes)
- ✓ inline CSS
- ✓ clickable image
- ✓ image map
- ✓ broken image
- ✓ SVG image
- ✓ background-image
- ✓ picture tag
- ✓ figcaption

If you want, I can also create:

- ✂️ **Anchor + Image full combined document**
- ✂️ **Video tag complete code**
- ✂️ **Audio tag full examples**
- ✂️ **Form input all types code**

Just tell me: "next topic" or the tag name 😊

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta name="viewport" content="width=device-
width, initial-scale=1.0">
  <title>Document</title>
</head>
<body>
  <ul>
    <li href="">apple</li>
    <li href="">banana</li>
    <li href="">grapes</li>
    <li href="">orange</li>
    <li href="">mango</li>

  </ul>

</body>
</html>
```

Your code is almost correct — but `<li>` **does NOT support** `href` .
`href` works **only inside** `<a>` **tags**, not in `<li>` .

So there are **two correct ways** depending on what you want:

1. Normal List (No Links)

If you want just a list:

html

 Copy code

```
<ul>
  <li>apple</li>
  <li>banana</li>
  <li>grapes</li>
  <li>orange</li>
  <li>mango</li>
</ul>
```

✓ 2. List WITH Links (Correct Way)

If you want clickable list items:

html

 Copy code

```
<ul>
  <li><a href="">apple</a></li>
  <li><a href="">banana</a></li>
  <li><a href="">grapes</a></li>
  <li><a href="">orange</a></li>
  <li><a href="">mango</a></li>
</ul>
```

✗ Wrong (your code)

html

 Copy code

```
<li href="">apple</li>  <!-- href not valid -->
```

 cannot click — browsers ignore href here.

If you want, I can also give you:

- ✓ styled list
- ✓ list with icons

- ✓ list with hover effect
- ✓ list with images
- ✓ list using CSS only

Just tell me 😊

[add images link](#)

Here are **three correct ways** to add **images + links** inside list items.

Choose the style you want 👉

✓ 1. Clickable Image + Text (Most Common)

html

Copy code

```
<ul>
  <li>
    <a href="https://example.com/apple">
       Apple
    </a>
  </li>

  <li>
    <a href="https://example.com/banana">
       Banana
    </a>
  </li>

  <li>
    <a href="https://example.com/grapes">
       Grapes
    </a>
  </li>
</ul>
```

✓ 2. Image Only (Clickable Image List)

html

 Copy code

```
<ul>
  <li><a href="https://example.com/apple"><a href="https://example.com/banana"><a href="https://example.com/grapes">
```

✓ 3. Stylish Image List (Image + Text Side-by-Side)

html

 Copy code

```
<style>
  ul li {
    list-style: none;
    margin: 10px 0;
  }
  ul li img {
    width: 40px;
    margin-right: 10px;
    vertical-align: middle;
  }
</style>

<ul>
  <li><a href="#"> Apple</a></li>
  <li><a href="#"> Banana</a></li>
  <li><a href="#"> Grapes</a></li>
  <li><a href="#"> Orange</a></li>
  <li><a href="#"> Mango</a></li>
</ul>
```

★ Final Full Code with Placeholder Images + Real Links

html

 Copy code

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>Fruit List with Images & Links</title>

  <style>
    ul li {
      list-style: none;
      margin: 10px 0;
    }
    ul li img {
      width: 40px;
      margin-right: 10px;
      vertical-align: middle;
    }
  </style>
</head>
<body>

<ul>
  <li><a href="https://example.com/apple">
<head>
  <meta charset="UTF-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>Fruit List</title>
</head>
<body>

  <h2>List of Fruits</h2>

  <ul>
    <li>Apple - see an apple</li>
    <li>Orange - see an orange</li>
    <li>Mango - see a mango</li>
  </ul>

</body>
</html>
```

If you want, I can also add:

- ✓ images
- ✓ links
- ✓ colors
- ✓ styling

Just tell me!

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta name="viewport" content="width=device-
width, initial-scale=1.0">
  <title>Fruit List with Images & Links</title>
```

```

<style>
  ul li {
    list-style: none;
    margin: 10px 0;
  }
  ul li img {
    width: 40px;
    margin-right: 10px;
    vertical-align: middle;
  }
</style>
</head>
<body>
```

```

<ul>
  <li> <a href="https://example.com/apple">  Apple</a> </li>
  <li> <a href="https://example.com/banana">  Banana</a> </li>
  <li> <a href="https://example.com/grapes">  Grapes</a> </li>
  <li> <a href="https://example.com/orange">  Orange</a> </li>
  <li> <a href="https://example.com/mango">  Mango</a></li>
</ul>

</body>
</html>
```

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta name="viewport" content="width=device-
width, initial-scale=1.0">

A//Z"> see an apple

Orange – see an orange

```
<li>Mango – <a href=""> </a> see a mango</li>
</ul>

</body>
</html> correct it
```

Here is your **corrected HTML code** with proper formatting, working images, and correct list structure.

Your Apple item had a very long Base64 image — I kept it and fixed everything.

✓ Corrected Full HTML Code

html

 Copy code

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>Fruit List</title>

</li>

<!-- MANGO -->
<li>
  Mango -
  <a href="#">
    
  see a mango
</li>

</ul>

</body>
</html>
```

✓ What I Fixed

- ✓ Corrected wrong closing tags
- ✓ Your long Base64 Apple image wrapped correctly
- ✓ Added missing `alt` attributes
- ✓ Fixed empty `<a>` tags for Orange & Mango
- ✓ Added placeholder images
- ✓ Clean structure, readable format

If you want a **more beautiful list with CSS**, just tell me!

short the link

Here is the **short, clean, corrected version** of your code with **short image links** (no big Base64):

✓ Clean & Short HTML Code (with short image URLs)

html

 Copy code

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>Fruit List</title>
</head>
<body>

<h2>List of Fruits</h2>

<ul>
  <li>
    Apple -
    <a href="https://via.placeholder.com/50" target="_blank">see an app
  </li>

  <li>
    Orange -
    <a href="https://via.placeholder.com/50/FFA500" target="_blank">see
  </li>

  <li>
    Mango -
    <a href="https://via.placeholder.com/50/FFC324" target="_blank">see
  </li>
</ul>

</body>
</html>
```

✓ What I did:

- Removed the long Base64 image
- Added short **placeholder image URLs**
- Added **target="_blank"** to open in new tab
- Made code clean and readable

If you want **real fruit images**, I can add those too!

complet code br tag

Here is the **complete explanation + HTML code** for the `<br>` tag.

✓ What is `<br>` tag?

The `<br>` tag is used to insert a **line break** (new line) in HTML.

- ✓ It does **not** need a closing tag
- ✓ It is used inside text, paragraphs, lists, etc.

✓ Complete HTML Code Using `<br>` Tag

html

Copy code

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>BR Tag Example</title>
</head>
<body>

  <h2>Using the &lt;br> Tag</h2>

  <p>
    This is line one.<br>
```

```
This is line two.<br>
This is line three.<br><br>
Two line breaks above created a blank line.
</p>

<h3>BR inside list:</h3>

<ul>
  <li>Apple<br>Fresh and red</li>
  <li>Orange<br>Full of Vitamin C</li>
  <li>Mango<br>King of fruits</li>
</ul>

<h3>BR inside Address:</h3>

<address>
  Aamir Hussain<br>
  Lucknow, India<br>
  Pin: 226001
</address>

</body>
</html>
```

✓ Where
 is used?

- Inside paragraphs
- Inside addresses
- Inside lists
- Inside forms
- Inside poems and lyrics

If you want, I can also give:

- ✦
 VS <p> difference
- ✦
 with CSS styling
- ✦ Real-life examples

Just tell me!

bold italic underline

Here are complete concepts + code examples for **Bold**, *Italic*, Underline in HTML.

✓ 1. Bold Text (/)

✓ = Bold (visual only)

✓ = Important text (semantic + bold)

Example:

html

Copy code

```
<b>This is bold text</b><br>  
<strong>This is strong (bold + important) text</strong>
```

✓ 2. Italic Text (<i> /)

✓ <i> = Italic (visual only)

✓ = Emphasized text (semantic + italic)

Example:

html

Copy code

```
<i>This is italic text</i><br>  
<em>This is emphasized (italic) text</em>
```

✓ 3. Underline Text (<u>)

✓ <u> = Underline

Used for highlighting or styling.

Example:

html

 Copy code

```
<u>This text is underlined</u>
```

Complete Code (Bold + Italic + Underline Together)

html

 Copy code

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>Text Formatting</title>
</head>
<body>

<h2>Bold, Italic & Underline Examples</h2>

<p><b>Bold Text using <code><b></b></code></b></p>
<p><strong>Bold Important Text using <code><strong></strong></code></strong></p>

<p><i>Italic Text using <code><i></i></code></i></p>
<p><em>Emphasized Italic Text using <code><em></em></code></em></p>

<p><u>Underlined Text using <code><u></u></code></u></p>

<h3>Combined Example</h3>
<p>
  <b><i><u>This text is Bold + Italic + Underlined</u></i></b>
</p>

</body>
</html>
```

If you want, I can also send:

- ✓ All text formatting tags: `<mark>`, `<small>`, `<sub>`, `<sup>`, `<del>`, `<ins>`, `<pre>`
- ✓ A *full practice worksheet* with answers

Just say "text formatting full code"!

case sensitive

Here is a simple, clear explanation of "Case Sensitive" with HTML examples:

What is Case Sensitive?

Case-sensitive means uppercase (A–Z) and lowercase (a–z) letters are treated as different.

Example:

- Apple $\neq$ apple
- HTML $\neq$ html
- Name $\neq$ name

Is HTML Case Sensitive?

 HTML is NOT case-sensitive.

These are exactly the same:

```
html
```

 Copy code

```
<b>Bold</b>
```

```
<B>Bold</B>
```

Both work the same in HTML.

HTML Attributes are NOT case-sensitive

These are same:

html

 Copy code

```
<input TYPE="text">
<input type="text">
<input Type="text">
```

BUT CSS & JavaScript ARE Case-Sensitive

✓ CSS example:

css

 Copy code

```
p {
  color: red;
}
P {      /*  wrong: CSS selectors are case sensitive */
  color: blue;
}
```

✓ JavaScript example:

javascript

 Copy code

```
let Name = "Aamir";
let name = "Hussain";

console.log(Name); // Different
console.log(name); // Different
```

Summary

Language	Case Sensitive?
HTML tags	 No
HTML attributes	 No

Language

Case Sensitive?

CSS selectors

✓ Yes

JavaScript

✓ Yes

If you want, I can also explain **camelCase**, **snake_case**, **PascalCase**, and **kebab-case**.

```
<h1>Shradha Khapra</h1>
<p>I love to teach :) </p>

<h2>Education</h2>
<ul>
< li> <b>10th Class (CBSE) </b> : 10cgpa </li>
<li><b>12th Class (CBSE)</b> : 94.4%</li>
<li><b>Bachelor in Engineering (COE) </b> : 8.9</li>
</ul>
<h2>Skills</h2>
<ul>
<Li>HTML, CSS, JavaScript</li>
<Li>Nodejs, SQL</li>
<li>Java, Python</Li>
</ul>
<h2>Hobbies</h2>
<ul>
<li>Reading</li>
<li>Debating /lif
|
```

Here is your **fully corrected HTML code** with **all mistakes fixed**, proper tags, proper `<li>` syntax, and clean formatting.

Your original code had issues like:

- Wrong `< li>` spacing
- Wrong `<li>` (not a valid tag)

- Wrong capitalization
- Unclosed tags
- Typos in
- Broken text at end

✓ Corrected and Clean HTML Code

html

 Copy code

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>Profile Page</title>
</head>
<body>

<h1>Shradha Khapra</h1>
<p>I love to teach :)</p>

<h2>Education</h2>
<ul>
  <li><b>10th Class (CBSE)</b> : 10 CGPA</li>
  <li><b>12th Class (CBSE)</b> : 94.4%</li>
  <li><b>Bachelor in Engineering (CSE)</b> : 8.9 CGPA</li>
</ul>

<h2>Skills</h2>
<ul>
